

How to Set The Time On Your Solar Water Heater!

If the power goes out in your home, you may have to reset the time on your solar hot water heater.

Here are the **3** simple steps you have to take!

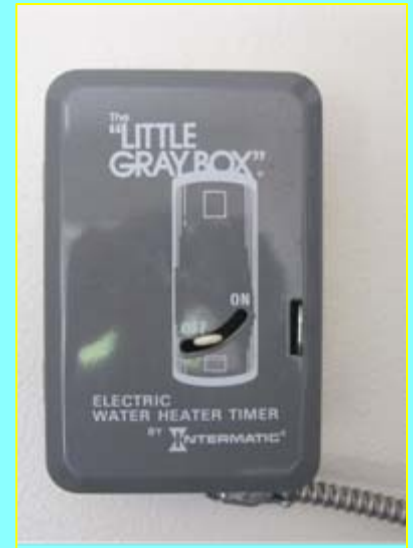

Not all homes have solar hot water heaters. If you're not sure, please contact your Resident Services Office!

Step 1

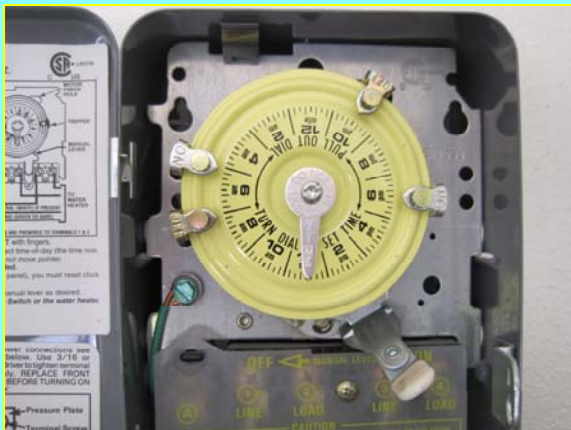

Locate your water heater.

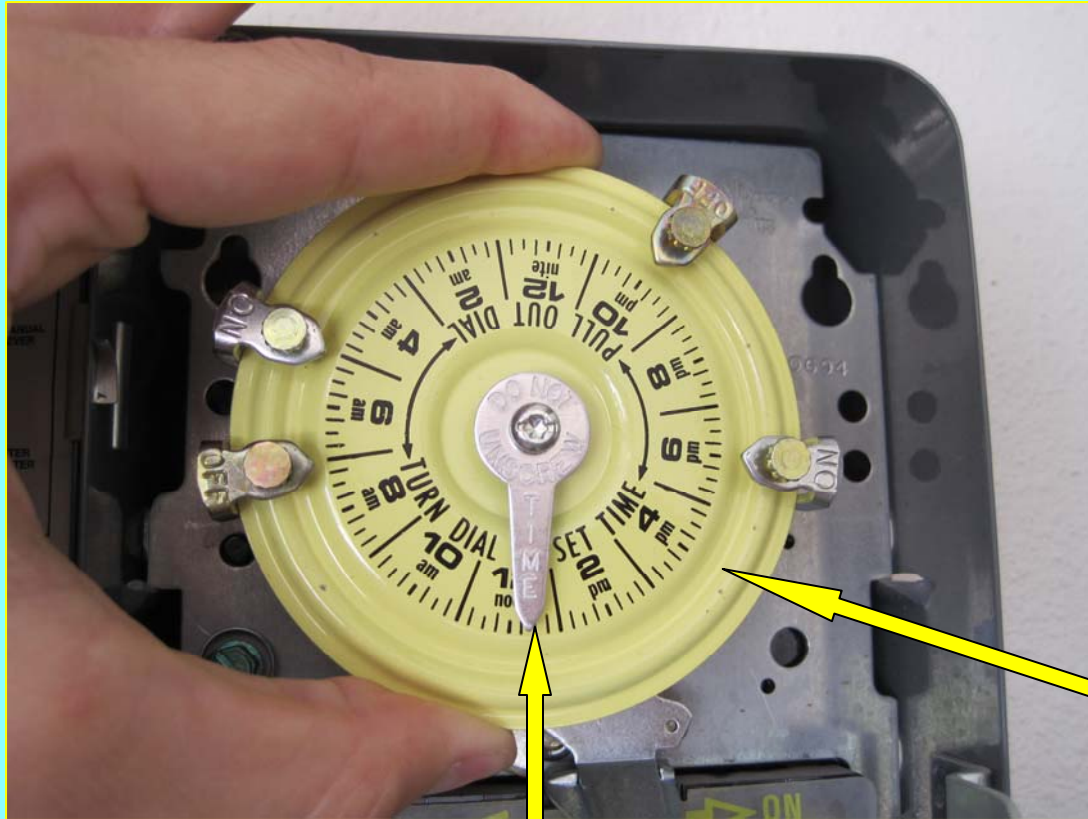

Next to the water heater is a "Little Gray Box." Open it.

You'll see a dial, a time hand and four clips inside.

Step 2

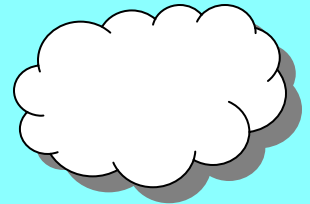

Time Hand

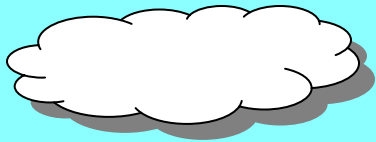

Gently pull the dial out and toward you.

Rotate the dial clockwise to align the time hand with the current time.

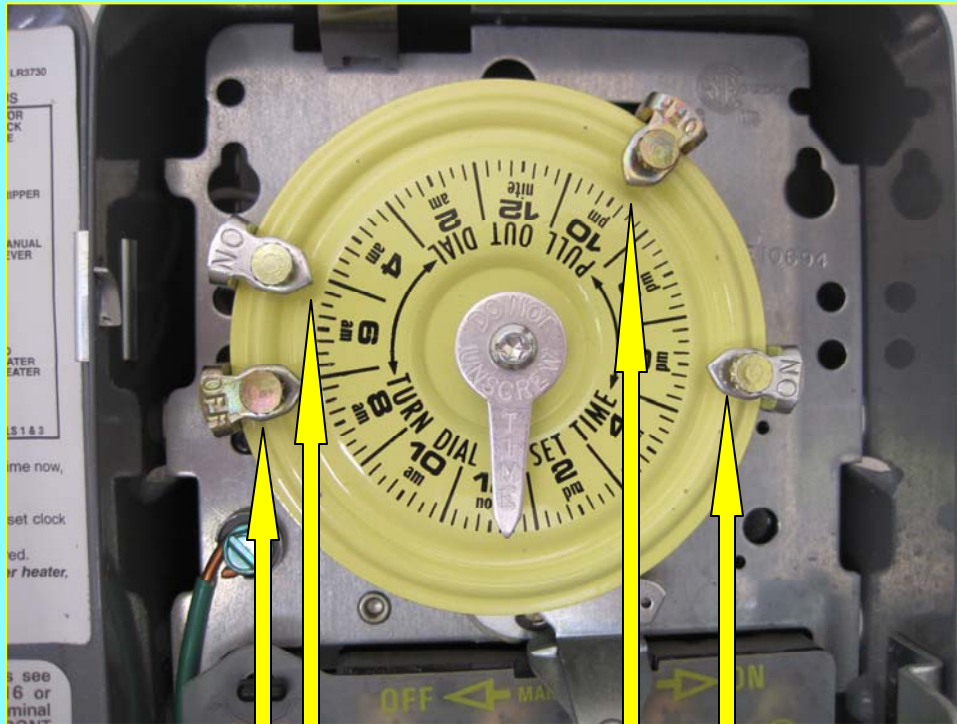

Dial

In this picture, the time is set to about 12:15 p.m.

Step 3

Clips

Clips

Note the number of clips on the dial. You should have four. If you are missing clips or if the clips are gathered at the bottom of the dial, contact your Resident Services Office (RSO).

There is no need to adjust any dials or the switch on the front of your box. Your Quality Assurance Specialist should have asked you about your schedule to set the timer to its proper settings during your move-in inspection. If you're not getting adequate hot water, please contact your RSO so we can reset it to match your family's schedule.

You're done!

If your home has a digital timer like these, please call maintenance so they can reset it for you.
